

# SECURITY MONITORING

## Cloud-Native Network Protection Platform

### OVERVIEW

SKOUT Security Monitoring uses a combination of best-in-class technology, cutting-edge analytics, and artificial intelligence to monitor and protect organizations. The solution is a comprehensive platform that is easy for businesses to implement but never sacrifices security.

SKOUT Security Monitoring is a cloud-native, streaming data analytics platform that includes a fully managed SIEM and a team of experts to decipher and remediate alerts – no matter if your systems are on-premises, in the cloud, or both.

#### Key Features

-  Real-Time 24/7 Monitoring
-  Cloud-Based AI Analytics
-  Customized Alerts
-  Log Correlation
-  Executive Reports

### HOW IT WORKS

Our SKOUTs monitor your network in real time 24x7, 365 days a year. Security Monitoring's core services include network intrusion detection, vulnerability scanning, and security log correlation and collection. Additional layers of security to protect your email and defend your desktops and other devices are also available. This managed platform allows you to focus on what you are best at – running your business – while we focus on your cybersecurity and keeping your business safe.

2

#### TEAMS

Security operations are regionally divided for North America and EMEA.

5

#### AGENCIES

The product was built by experts from five government agencies.

24

#### FEEDS

Threat feeds are aggregated from 24 sources.

HAVE TRUSTED SKOUT CYBERSECURITY

## BENEFITS

SKOUT Security Monitoring reduces the costs and complexity of network security, improves security posture, and eases compliance burdens. By leveraging our security expertise, you can empower your IT department or outsourced IT partner to focus on core business technology activities rather than dedicating all their time to the threat of security attacks and breaches. Everything from installation and tuning to upgrades and reconfiguration is handled by SKOUT.

Our security operations center is staffed with expert analysts who go beyond data processing to identify what activity is safe for your systems and what is an actual threat that you need to be alerted to. The

operations center holds SOC 2 Type 2 certification and is CJIS ready – ensuring that your logs and data are protected by a team of highly trained experts using best-in-class security practices. The platform uses a combination of analysts, cutting-edge analytics, and artificial intelligence to identify potential threats.

During the hunt for potential threats and incursions, SKOUT leverages the combined, shared intelligence of many different cybersecurity organizations in both the public and private sectors, including the Department of Homeland Security. Of course, your company information always remains confidential.
